

Ken Daniel Llamanzares, SO2 Computer Engineer

✉ kd.llamanzares@gmail.com ☎ 09293537204 📍 Sto. Tomas, Batangas

EDUCATION

Bachelor's of Science in Computer Engineering, National University

08/2022 – 07/2026 | Manila, Philippines

SKILLS

API Integrations

- Connected systems such as Gmail, Google Sheets, and Firebase through APIs.

Embedded Systems

- Microcontroller Programming
- Hardware-Software Integration & Debugging
- End-to-End testing of IoT and ML pipelines & OS Installation

Computer Vision & Machine Learning Neural Networks

Workflow Automation (n8n)

- Designed automated workflows for screening, notifications, and business process tasks.

Web Development

- Built responsive web interfaces using PHP, HTML, CSS, and JavaScript.

Python Programming & Scripting

- Python syntax & Control structures

PROFESSIONAL EXPERIENCE

Technical Support Engineer Intern, *Straive*

02/2026 – 04/2026 | Calamba, Philippines

- Delivered IT support across hardware and software environments through system diagnostics, troubleshooting, and end-user assistance to minimize time
- Performed system reformatting, OS installation, and configuration of workstations, improving device reliability and standardization across users.
- Designed and deployed an internal web-based server platform for the End-User Computing (EUC) team to centralize workflows, including inventory tracking, production mapping, and task management

PROJECTS

SwineWatch - ASF Detection and Monitoring System, *Computer Vision & Machine Learning*

- Developed a real-time pig surveillance system using thermal and Raspberry Pi cameras to detect early ASF symptoms, with a React + Tailwind dashboard, Firebase for real-time data, and Cloudinary for image storage.

Digital Ears: Emotion Detection from Speech Signals, *MATLAB, Digital Signal Processing*

- MATLAB-based speech emotion analysis system using Short-Time and Mean Energy features, with audio preprocessing and basic emotion classification (Angry, Happy, Sad).

MiniBot – Cloud-Controlled Embedded Robot, *Arduino + Firebase, Embedded System & Automation*

- Built a Wi-Fi-enabled mini robot using Arduino and ESP32, with real-time remote control via Firebase and cloud-based motor actuation through a web/mobile.

Recruitment Workflow Automation Project | n8n, Google Workspace APIs

- Designed and deployed a workflow automation system for candidate screening, status updates, and email communication using rule-based logic

CERTIFICATES

Computer System Servicing

TESDA National Certification II

Lean Six Sigma Yellow Belt

Council for Six Sigma

Basic Occupational Safety and Health (BOSH) – 40 Hours

5M Consultancy and Safety Services

Introduction to Modern AI

CISCO Networking Academy
